### **DETAILED ACTION**

1. Applicant's response filed on 03/29/2006 has been fully considered. Claims 1 and 7 are amended, claims 1-20 are pending. (NOTE: Claims 11-20 are withdrawn from consideration as non-elected invention).

### ***Election/Restrictions***

2. Applicant's election of Group I claims 1-10 in the reply filed on 03/29/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barcock et al. (US 6,502,935 B1) in view of Maeda et al. (US 6,146,712).

Barcock discloses an ink jet recording material comprising a support, a lower layer on the support, and an upper layer on the lower layer (abstract). The support can be a resin coated paper (col. 3, line 55). The upper layer comprises a binder, inorganic particles such as alumina or silica, and crosslinking agents (col. 2, line 62 thru col. 3,

line 31). The lower layer comprises a binder, inorganic particles such as alumina or silica, and crosslinking agents (col. 2, lines 13-61). The particle size of the particles in the upper layer is smaller than the particle size of particles in the lower layer. Barcock does not disclose crosslinking by irradiation.

Maeda discloses an ink jet recording sheet comprising a base sheet and a coating layer on the substrate (abstract). The coating layer is formed from a composition containing particles (col. 6, line 35), polyalkylene oxide (col. 5, line 19) and a polyvinyl alcohol resin having a degree of polymerization within the claimed range (Examples 1 and 2). The coating layer is irradiated while it is wet (claim 1).

Barcock and Maeda are analogous art because they are from the same field of endeavor that is the ink jet recording art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to crosslink the binder by irradiation instead of by using crosslinking agents so as to provide an ink jet recording sheet having a high water resistance and a high image quality (col. 7, line 28).

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
